Miloš Stevanović

Student IT

Hi, I'm Milos, a third-year IT student with a passion for programming. I'm skilled in various languages and enjoy solving complex problems. I'm always eager to learn new technologies and take on exciting challenges in the IT field.

PROJECTS

• Banking Management System

Using **Java**, I developed a functional banking system. Implemented an **SQL** database with **MySQL**, including two designed tables for the application. Users can withdraw money, deposit funds, and transfer between accounts. Access is available with an existing account or by creating a new one, offering an intuitive financial management experience.

• AI Legion

Developed a virtual assistant in **Python** that responds to voice commands and performs various actions. When "Legion" is spoken, the assistant connects to OpenAI via **API**, providing a full AI experience.

• RG Quiz

Created a quiz using **HTML**, **CSS**, and **JavaScript** with an integrated database of 100 predefined questions. Each attempt draws 10 random questions. Users must answer each question to proceed, with correct answers highlighted in blue and incorrect ones in red. At the end, users receive feedback on their score.

• Portfolio

This project is a key part of my programming portfolio. It covers the entire process from idea to final creation, including design, form-email integration, and **web server deployment**. Created using **HTML**, **CSS**, and **JavaScript**, it showcases my skills for potential clients and companies seeking web design and programming services.

CERTIFICATES

- Oracle Database Design
- Oracle Java Fundamentals
- DigiPsyRes 40-hour Course Certificate
- Oracle Database Programming with SQL
- Oracle Java Programming

ADDITIONAL SKILLS

- Microsoft Office
- Libre Office
- Canva
- Figma
- Linux (Arch, Debian, Fedora)
